PRO

An integrated quick-release mechanism ensures immediate access to equipment and helps you work efficiently, even when under time pressure.

On the back panel, integrated fastening loops ensure the equipment is securely held in place and prevent it from slipping during transport and use.

PAX RSQ Gear Carrier

The inner front panel is fitted with spacious mesh pockets, which provide additional storage space for small items and additional equipment.

The external side pockets, with their adjustable interior compartments, allow for personalised organisation and the secure stowage of a wide variety of equipment.

For technical rescue scenarios, the material backpack features a handle that can be attached to a winch, enabling it to be securely secured and handled.

In addition, the material backpack can be hung up in a panel-like configuration, allowing the equipment to be arranged clearly and made quickly accessible.

The integrated MOLLE attachment system further expands the range of uses and allows for the flexible attachment of additional pouches and modular equipment components.
